

CONTENTS

| | |
|---|----|
| 1. BASIC GEOMETRICAL NOTIONS IN THE SPACE \mathbf{R}^n | 5 |
| 1.1. Linear inequalities with two unknowns in the coordinate plane Oxy | 5 |
| 1.2. Linear inequalities with three unknowns in the three-dimensional space \mathbf{R}^3 with coordinate system $Oxyz$ | 8 |
| 1.3. Linear equations and inequalities in the space \mathbf{R}^n | 9 |
| 1.4. Matrix denotations and basic notions in the space \mathbf{R}^n | 10 |
| 1.5. Linear dependence and independence of vectors in the space \mathbf{R}^n | 12 |
| 1.6. Basis of the space \mathbf{R}^n | 13 |
| 1.7. Rank of a matrix | 14 |
| 2. GENERAL PROBLEM OF LINEAR OPTIMIZATION | 17 |
| 2.1. Basic definitions and basic notions of Linear Optimization | 17 |
| 2.2. General principles of Linear Optimization | 21 |
| 3. THE GRAPHICAL METHOD FOR SOLVING OF THE LINEAR OPTIMIZATION PROBLEM | 23 |
| 3.1. A graphic approach to the linear optimization problem in two-dimensional case | 23 |
| 3.2. Graphical method for solving of two-dimensional linear optimization problem | 24 |
| 4. THE SIMPLEX METHOD | 30 |
| 4.1. Basic definitions and basic notions of the Simplex Method | 30 |
| 4.2. Simplex tableau | 33 |
| 4.3. The simplex algorithm | 34 |
| 5. TRANSPORTATION PROBLEM | 45 |
| 5.1. Basic definitions and basic notions of the Transportation Problem | 45 |
| 5.2. Modified distribution (MODI) method | 49 |
| 6. DUALITY IN LINEAR OPTIMIZATION | 62 |
| REFERENCES | 65 |
